

I don't really know how to create a portfolio of websites, but I purposefully designed and developed my personal website in public, completely Open Source, so I can give a sneak peak of how I work – built it using TypeScript with NextJS 14 (App Router), paired with TailwindCSS and using some of my own plugins on top of it, and Framer Motion for some animations.

- GitHub repository: <https://github.com/galcsikgyozo/personal-website>
- Figma file: <https://www.figma.com/file/ubq1ndffQQP385MJDCSpHx/>

Some other websites I've done that are still online:

(most of the work I do are for promotional websites, so unfortunately they usually go offline after a few months when the advertising period is over)
